

WIRELESS NETWORKS AND WiFi SURVEYS

Is your wireless network reliable or does it drop connections frequently?

Is WiFi an asset or a frustration to your staff?

Can your staff take their laptop from their desk to the Huddle Room for a group meeting?

Do you need more speed from and / or more devices connecting to your WiFi?

MicroServe does onsite WIRELESS SURVEYS to locate and report WiFi problems.

After we find the problems on your network, we can:

- Resolve switch problems
- Resolve Internet Bandwidth problems
- Reposition your existing Access Points
- Add new APs and cabling as needed
- Replace old WiFi infrastructure with the new 802.11 ac standard
- Setup roaming capabilities

After we complete the necessary remediation work, your WiFi network will become an asset to your business and enable your staff to work efficiently, effectively and frustration free.

We test, fix, and support 802.11 a / b / g / n / ac wireless devices and networks for both indoor and outdoor installations.
